PROFESSIONAL SUMMARY

Software Engineer with 2.5 years of experience building production web applications in React, Angular, and TypeScript, including hands-on backend work with Node.js, Express, and MongoDB. Owned a UI module end-to-end in a healthcare-regulated environment, shipping 2 weeks ahead of schedule; migrated an Angular codebase from v16 to v19 across 8+ modules; and independently designed and built a full-stack job management proof of concept (React, Redux, Node.js, Express, MongoDB). I also have working knowledge of Java Spring Boot and Python. Seeking a Frontend or Full Stack Developer role.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React, Redux, Angular (v16-v19), RxJS, NgRx, Tailwind CSS, Bootstrap, HTML, CSS, Next.js, State Management

Backend: Node.js, Express.js, REST APIs, GraphQL

Databases: MongoDB, SQL, PostgreSQL

Testing: Karma, Jasmine, React Testing Library, Unit Testing, Test Automation, Playwright

Tools & Practices: Git, VS Code, Postman, Component-Driven Architecture, CI/CD, Agile, Scrum

AI Tools: Claude Code, GitHub Copilot, Codex

Core CS Fundamentals: OOPS, DBMS

Secondary Skills: Java, Spring Boot, Python

PROFESSIONAL EXPERIENCE

Software Engineer (Fullstack Engineer) | Happiest Minds Technologies | Bengaluru, India | Aug 2023 - Dec 2025

Client: Mercury Ignite (WebMD), a healthcare platform

- Owned a UI module end to end, from development through **QA and UX** validation, shipping **2 weeks** ahead of schedule.
- Migrated an Angular app from **v16 to v19** across **8+** modules, adopting standalone components, signals, and the **@if/@for/@track** control flow.
- Built a **config-driven** component architecture for dynamic chart generation, cutting duplicate code 30% and saving ~10 hrs/week in maintenance.
- Integrated REST APIs into the Angular frontend with authentication and protected routes, using RxJS operators (**switchMap, debounceTime, forkJoin, catchError**) to manage async calls and centralize error handling.
- Wrote **unit tests** in Karma and automation tests in Playwright for new features across 12+ modules.
- Fixed backend bugs in **Node.js** and **Express** during sprint cycles, resolving issues in **API endpoints** consumed by the frontend.

Internal Project: Job Management Portal (Full Stack POC)

- Designed and built a full stack job management system (React, Redux, Node.js, Express, MongoDB) for job postings and candidate applications as a self-driven internal POC.
- Built RESTful backend services with rate limiting on public endpoints and polling-based endpoints to keep job and application status updated in near real time.
- Designed the MongoDB schema with deliberate relationships between jobs, candidates, and applications, using indexes and embedding/referencing decisions for real-time CRUD with data integrity.

PERSONAL PROJECTS

Expense-Tracker Application Parses uploaded PDF and CSV bank statements into readable spending analytics, cutting the time needed to manually review transaction history.

UPI MESH Extended an offline payment simulation with RSA digital signatures, Redis-backed idempotency, bounded concurrency retries, and an Angular dashboard featuring transaction monitoring, pipeline traces, and SVG-based mesh visualizations.

EDUCATION

BE | CSE Chitkara University, Punjab, India | Aug 2019 – Jun 2023 | **CGPA: 9.89**
